

MEDAR/MEDATLAS II

MEDiterranean Data Archaeology and Rescue

MEDAR is a MAST Concerted Action MAS3-CT98-0174/IC20-CT98-0103

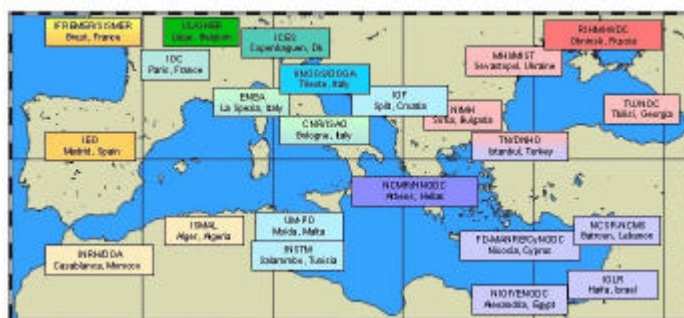

Objectives

- ◆ To compile and safeguard historical data sets
- ◆ To make available comparable data sets
 - Common format
 - Common protocol for quality checks
- ◆ To compute climatological fields
- ◆ To publish and disseminate observed data and climatology
- ◆ To enhance communication between scientists and data managers

MEDAR Network : 23 participants

- Regional archiving - Western Basins
- Regional archiving - Central Basins
- Regional archiving - Eastern Basins
- Regional archiving - Black Sea
- Thematic centers - Objective analysis
- Thematic centers - Quality assurance
- International organisation
- Dark = Coordinating centers
- Light = National coordinators

Database content

Volume of the database :
doubled since 1997

Data type	Nb of Profiles in MEDATLAS2002 (MEDATLAS 1997)
CTD	35 679 (15 778)
Bottle	88 323 (33 977)
MBT and XBT	161 848 (156 474)
Thermistors	29 (29)

Parameter	Nb of Profiles	Parameter	Nb of Profiles
Temperature	284 371	Nitrite	10 508
Salinity	118 009	Ammonium	5 239
Oxygen	44 928	Chlorophyll	4 672
Phosphate	20 761	Alkalinity	2 548
Silicate	15 920	Total Phosphorus	2381
PH	14 512	H ₂ S	1 843
Nitrate	10 572	Total Nitrogen	153

2843 TEMPERATURE profiles (12852 from Bottle and CTD + 161848 from MBT and XBT)

118009 SALINITY profiles

44928 OXYGEN profiles

20761 PHOSPHATE profiles

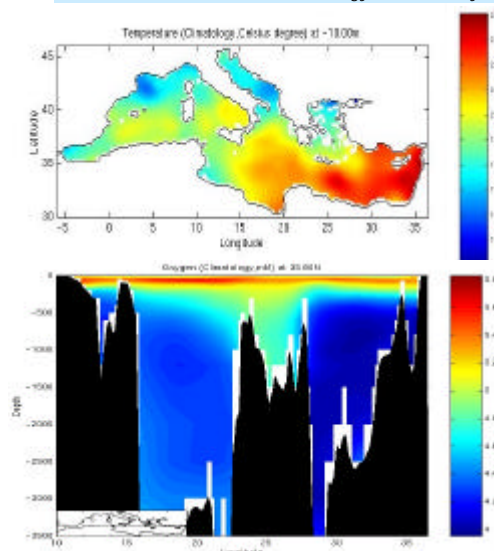

Overall quality of the data set :
A quality flag is assigned to each numerical value by automatic and visual checks

Climatology - Objective Analysis :

- ◆ Computation of Climatological Analysis by Variational Inverse Model (VIM) algorithms
- ◆ Computation made on finite elements and then re-interpolated on a regular grid (0.2 degrees in Latitude and Longitude)
- ◆ T, S and bio-chemical climatology reviewed by regional experts and modellers

- ◆ Annual, seasonal and monthly climatology for Temperature, Salinity
- ◆ Annual and seasonal climatology for Oxygen, Silicate, Phosphate and Hydrogen sulphide (H₂S) in the Black Sea
- ◆ Annual climatology only for Nitrate, Nitrite, PH, Ammonium, Alkalinity, Chlorophyll
- ◆ No climatology for Total Phosphorus and Total Nitrogen

Final product :
4 CDROMs
